Cambodia Renewable Energy & Policy Development

April 07, 2026

CONTENT:

1. **Cambodia's energy landscape**
   - *Progress of electrification*
   - *Energy demand & supply*
   - *How much energy is imported*
   - *Renewable energy progress*

2. **Cambodia's energy policies**

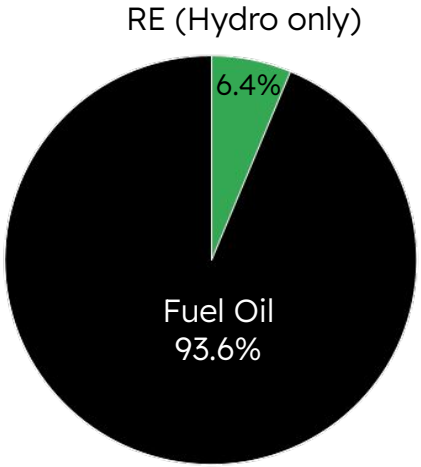

❖ Energy Mix: How Cambodia electrifies

(Energy)Lab

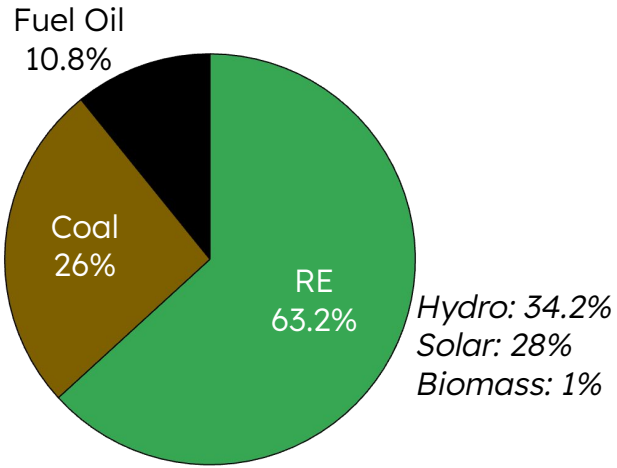

Electrical Power (2003)

Power capacity: **205 MW**
RE share: **6.4%**
Electrification: **19%** HH connection

Electrical Power (2025)

Power capacity: **5,932 MW**
RE share: **63.2%**
Electrification: **95%** HH connection

❖ Electricity Demand

Year	Electricity (GWh)	Growth
2025	22,361	Average annual growth ~14%
2024	19,972	
2023	16,804	
2022	14,960	
2021	13,097	

Dominant sector: Industrial & Building Sector (Residential + Commercial)

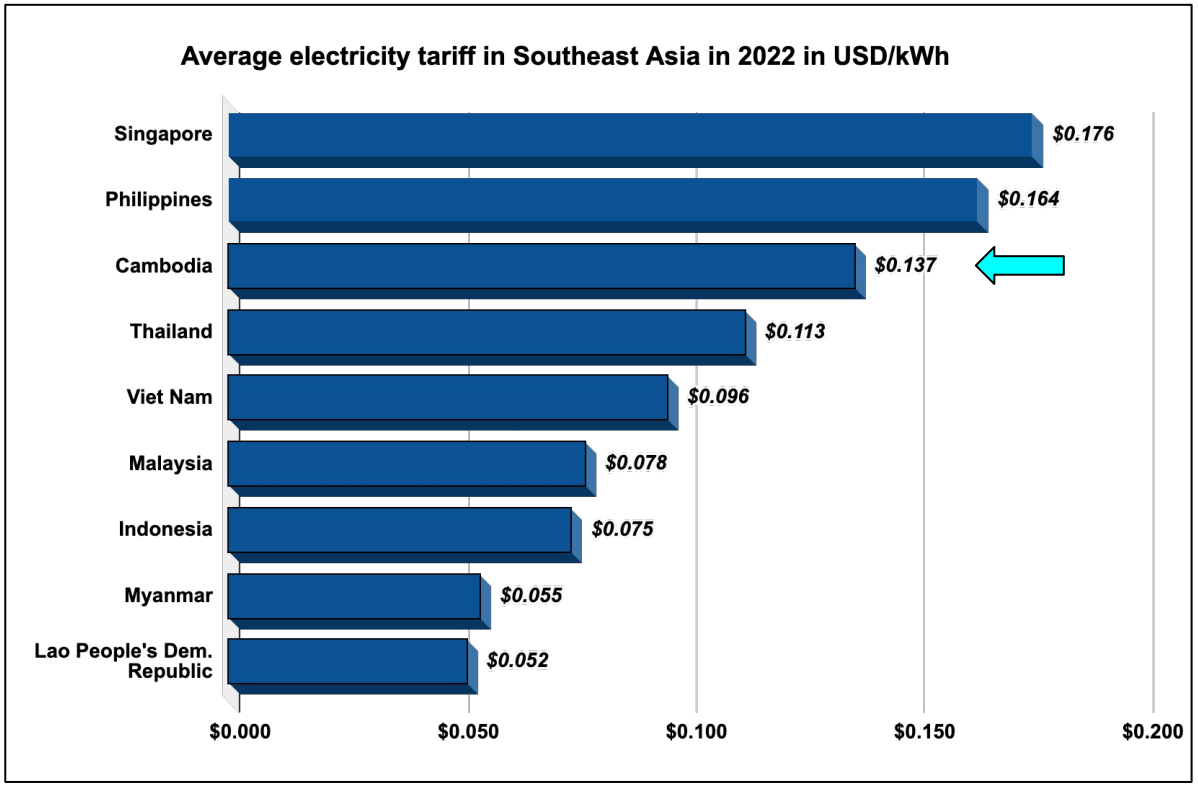

Electricity demand is not just growing — it's accelerating structurally!

- Industrial activities
- Cooling demand
- Electrification

❖ Strain generation capacity
❖ Require grid expansion
❖ Strongly justify Solar + BESS and consumer-side energy efficiency

❖ Electricity Price

(Energy)Lab

Third highest in SEA

USD 0.137/kWh

- High generation cost
- Imports
- Limited economy of scale

Source: ClimateScope.org

❖ Energy Imports (2025)

(Energy)Lab

Diesel: $1,260 M
Gasoline: $840 M

Gas:
$334 M

- $2.43 billion in total
- Downed 9.6% compared to 2024
- Improved efficiency
- Increased share of RE

Electricity:
Over $100 M

- 1,765 GWh of import
- Up 6% compared to 2024
- Less import from TH
- More import from VN and Laos

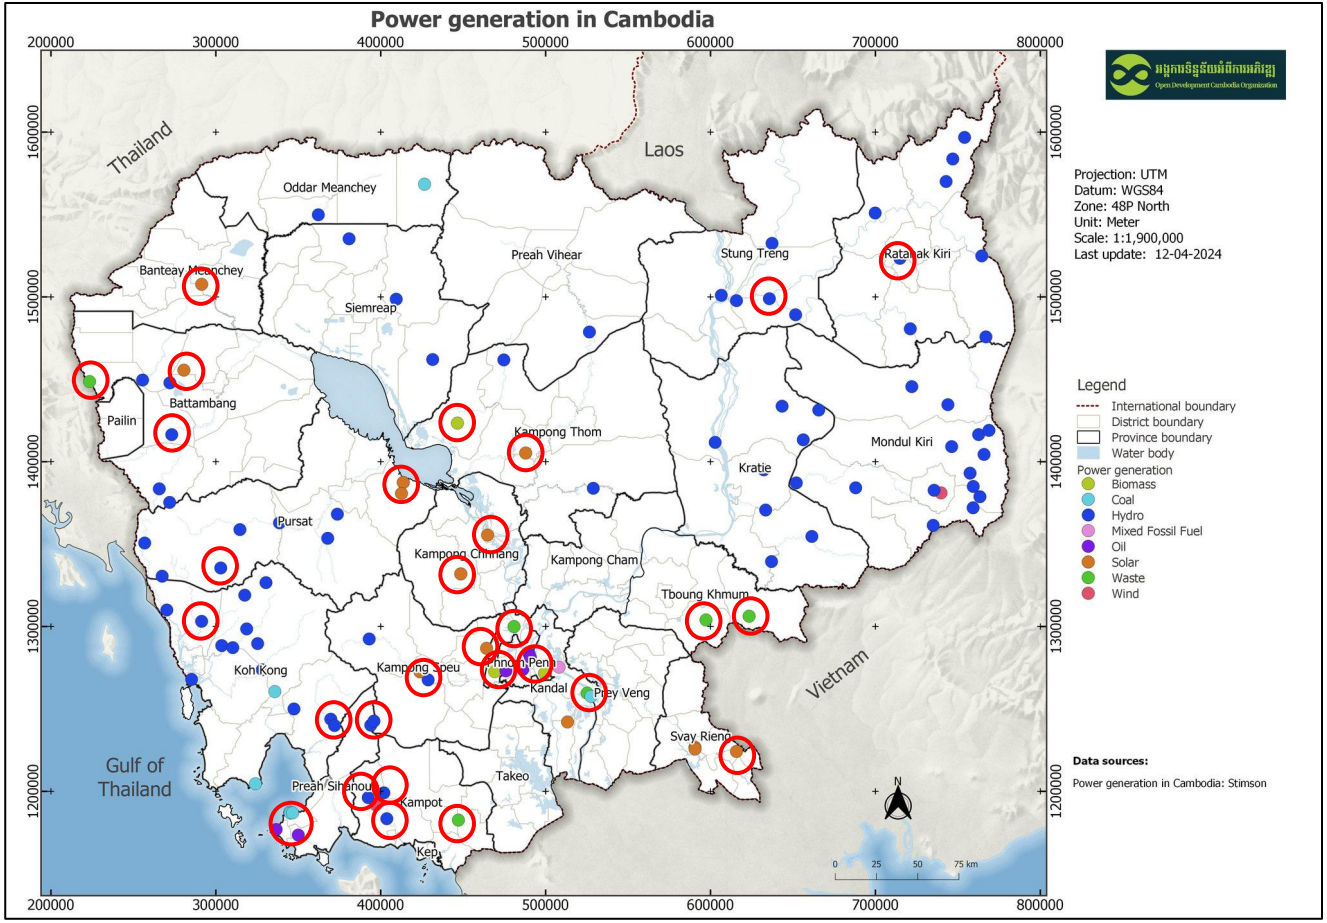

Source: Ministry of Commerce
Source: EAC

Fossil fuel and energy security:

- 20% of the world fuel supply disrupted
- Fuel price increases — immediate impact for a fuel-importing country like Cambodia
- Gasoline up from $1 per liter to **$1.4**
- Diesel up from ~$1 per liter to **$2.05**
- LPG price increased significantly
- Transportation, farming, low-income families affected

❖ Renewable Energy

(Energy)Lab

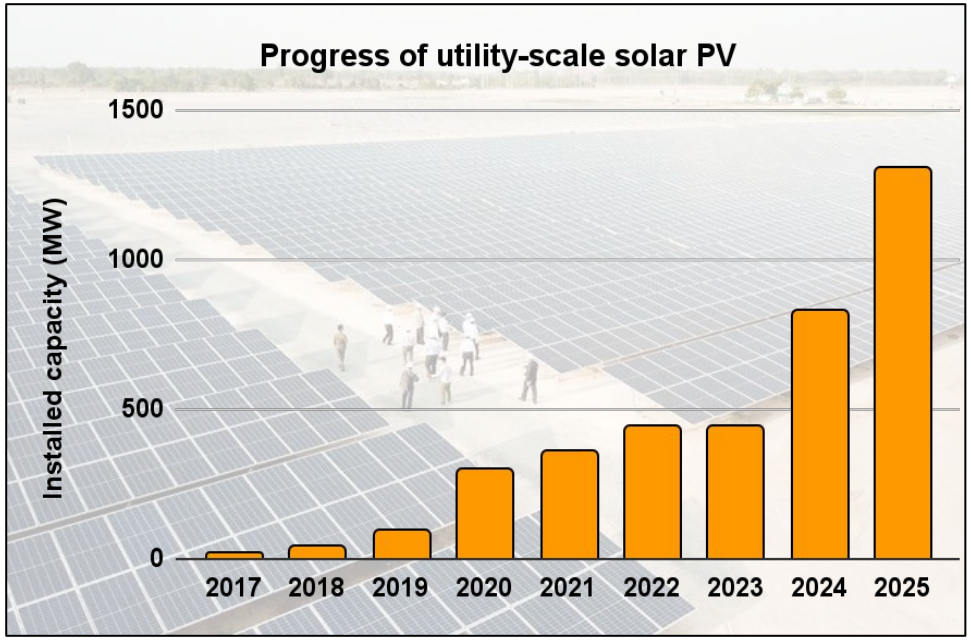

- Hydropower
- Solar PV
- Biomass

○ Existing

Source: Open Development Cambodia

Progress of Solar PV in Cambodia, 2025

- **1,307 MW** of utility-scale solar
  ~ 8.9% annual generation
- **169 MW** of rooftop solar
  ~ 1.3% annual generation
- Rooftop solar growing but facing barriers such as:
  - RTS regulation
  - No FiT/NEM
  - Compensation tariff

Data from EAC Reports

❖ Renewable Energy

(Energy)Lab

Name - Province	Capacity (MW)	Year of Operation
Sunseap Solar Power - Svay Rieng	10	2017
Tai Seng Solar PV - Svay Rieng	5	2017
SchneiTech Solar Power Plant - K. Speu	80	2019
Soma Solar PV - K. Thom	5	2020
SchneiTech Sustainable - K. Chhnang	60	2020
SchneciTech Infinite - Pursat	30	2020
SchneiTech Sustainable - Pursat	60	2020
Solar Power Plant - B. Meanchey	39	2021
Ray Power - B. Meanchey	30	2021
Risen Energy - Battambang	60	2021
Green Sustainable Venture - Svay Rieng	20	2022
Prime Road Alternative - K. Chhnang	60	2022

Business July 20, 2018

ADB-backed solar park to be ready in November

*Current projects more than on the list

❖ Renewable Energy

(Energy)Lab

Wind Power

- Early stage
- Limited potential
- Feasibility shows Kampot and Mondulkiri

Wind farm in Kampot
(Image source: The Phnom Penh Post)

1. Wind power project in Mondulkiri

- Capacity: 150 MW
- Status: Underway, scheduled to complete in 2026

- Capacity: 150 MW
- Status: Agreement signed
- Scheduled to complete in 2027

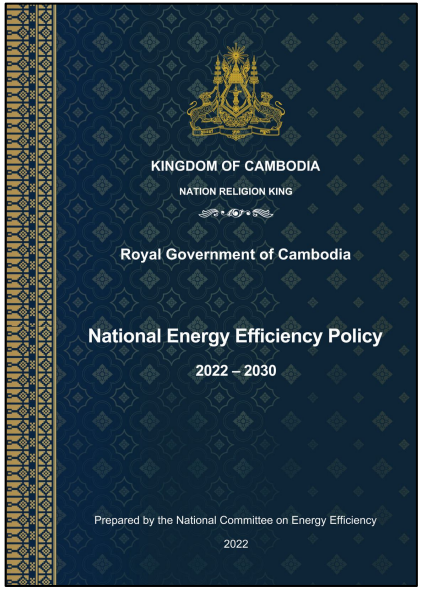

2. Wind power project in Kampot

- Capacity: 80 MW
- Status: Completed? (With delayed PPA negotiation)
- By: The Blue Circle

Cambodia’s energy policies

❖ Policy

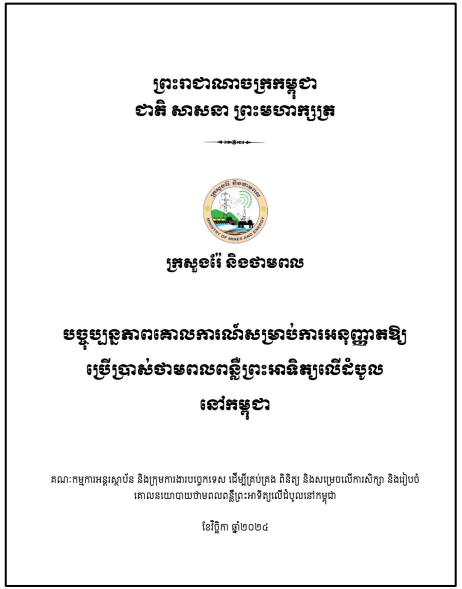

(Energy)Lab

Energy Efficiency NEEP 2022-2030

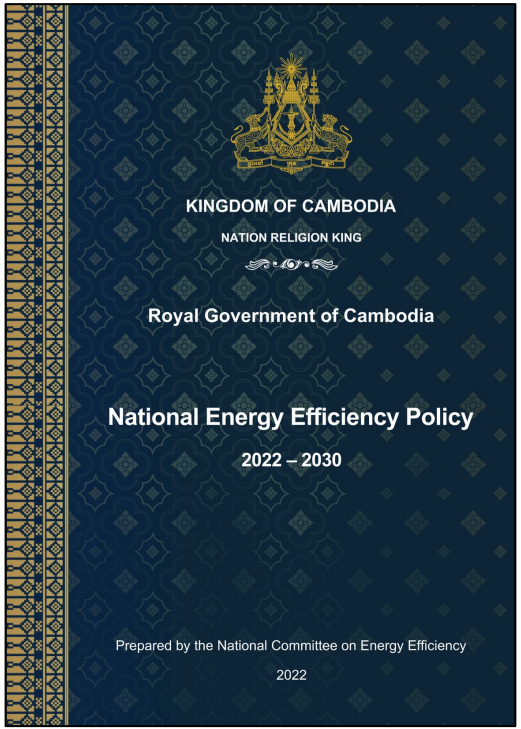

EV Policy 2024-2030

RTS Regulation in Cambodia

❖ Policy - NEEP

19% total energy reduction by 2030:

- ❑ 20% Industrial Sector
- ❑ 34% Residential Sector
- ❑ 25% Commercial Building
- ❑ 29% Public Service
- ❑ 5% Transport Sector

❖ Policy - NEEP

(Energy)Lab

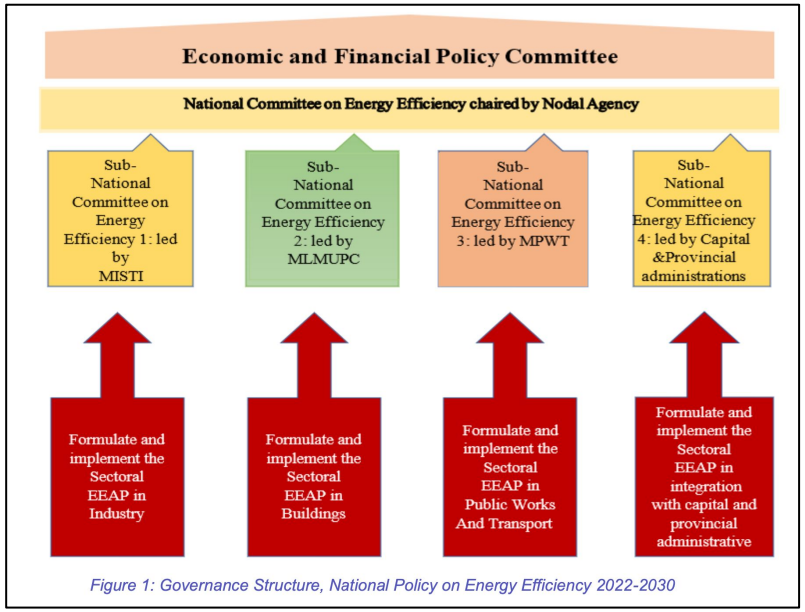

Figure 1: Governance Structure, National Policy on Energy Efficiency 2022-2030

Interventions:

- **Industrial:** Energy Management Program, Energy-efficient technologies
- **Commercial:** EE standards for building, incentives for energy-efficient equipment, energy audits, etc.
- **Residential:** Minimum Energy Performance Standards, Building Energy Code (BEC)
- **Public services:** EE for public buildings, LED for road lighting, etc.
- **Transport:** EVs, fuel efficiency, and public transportation

Observation: Growing momentum, little progress:

- Momentums on MEPS for electrical appliances and ACs, EE standard and labelling
- Prakas on Efficiency Regulation for ACs (April 2025)
- Unclear EE progress — lacking evaluation and monitoring mechanisms
- Implementation challenging as deadline approaches

❖ Policy - EV

(Energy)Lab

The National Policy on the Development of EV 2024-2030 serves as a strategic roadmap and driving force to attract investments, **promote EV adoption**, and develop the entire EV ecosystem in Cambodia.

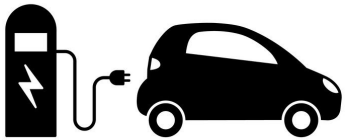

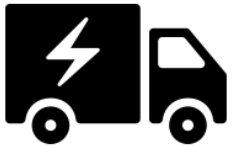

720,000 E2Ws

20,000 E3Ws

25,000 E4Ws

5,000 Heavy-duty vehicles

Key measures to achieve the target

Development of
Supporting infrastructure

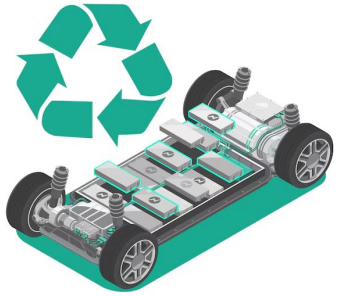

Establishment of
Supply chain

Establishment of
Incentive mechanism

Awareness raising

EoL waste management

As of March 13, 2026:

13,713 EV units registered, majority of which are E4Ws.

Great progress in EV adoption, but can we realistically reach the target of 770,000 units by 2030?

Fuel supply disruption in the Middle East acts as a catalyst to boost EV adoption in Cambodia — the case of tax reduction in Cambodia

❖ Policy - EV

(Energy)Lab

Sub-Decree No. 18, February 2021
Special Tax Adjustment

Sub-Decree No. 52, March 2026
Import Tax Adjustment

*ICE & HEV Car***	*EV (BEV only)*	*EV (BEV)*	*EV (PHEV)*
Import Tax: 35%	Import Tax: 35%	Import Tax: **0%**	Import Tax: **7%**
Special Tax: 60% >> **50%**	Special Tax: 30% >> **10%**	Special Tax: 10%	Special Tax: 10%
VAT: 10%	VAT: 10%	VAT: 10%	VAT: 10%
Total ~ **120%** *of the vehicle price*	Total ~ **60%** *of the vehicle price*	Total ~ **21%** *of the vehicle price*	Total ~ **29.5%** *of the vehicle price*

*Before Sub-Decree No. 52: A BEV **$20,000** >> **$32,000,** after tax*
*After Sub-Decree No. 52: A BEV **$20,000** >> **$24,200 only**, after tax*

Adjustment of customs import duty (Sub-Decree No. 52)

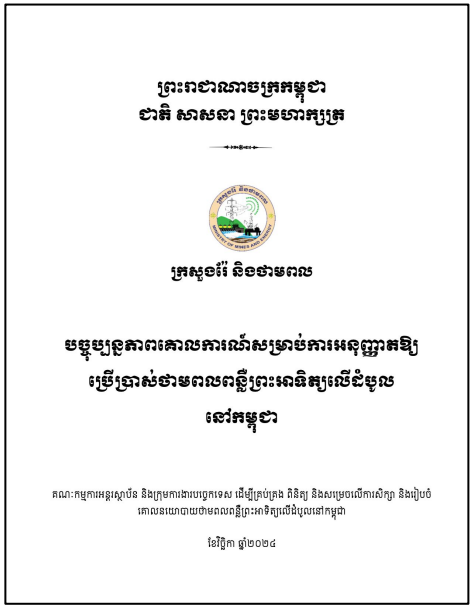

Items	Previous Rate	Rate Effective 1 April 2026
EV Battery Charger, Electric Rice Cooker, Solar Lamps/Lights	7%	0%
Solar PV System, Electric Cookstove, Electric Kettle, Commercial EV (BEV, HEV, PHEV), Motor for EV, Lithium Battery	15%	0%
Family PHEV	35%	7%
Family BEV and Induction Cooker	35%	0%

Timely initiative to support solar system, E4Ws, and electric appliances, but risk overlooking the real impact from E2W and E3W.

❖ Policy - Revised RTS

(Energy)Lab

Principle for Permitting the Use of Rooftop Solar (RTS Regulation)

ព្រះរាជាណាចក្រកម្ពុជា
ជាតិ សាសនា ព្រះមហាក្សត្រ

ក្រសួងរ៉ែ និងថាមពល

គោលនយោបាយថាមពលពន្លឺព្រះអាទិត្យលើដំបូលនៅកម្ពុជា

ខែវិច្ឆិកា ឆ្នាំ២០២៤

RTS refers to solar PV system installed behind the consumer's energy meter with the premise of the consumer for **self-consumption** purposes.

❖ Policy - Revised RTS

(Energy)Lab

What RTS enables:

RTS opens the door:

- ❑ Residential solar less than 10kW
- ❑ Growing opportunity for self-consumption
- ❑ Clear permitting process
- ❑ Fixed compensation tariffs
- ❑ Supports national RE target
- ❑ Increasing investor confidence

What RTS restricts:

RTS controls expansion:

- ❑ Annual quota (~30 MW/year)
- ❑ No FiT/NEM
- ❑ Compensation tariff
- ❑ No third-party ownership
- ❑ No PPA or DPPA
- ❑ Licensing & registration requirements

RTS allowed — but carefully controlled to balance grid stability and utility sustainability

HIGHLIGHT

Energy Landscape - Key Realities

- ❏ Demand rising rapidly (industry + cooling)
- ❏ Electrification nearly achieved (~95%)
- ❏ Electricity price among highest in SEA
- ❏ Heavy import dependence → high exposure to shocks
- ❏ RE expanding — but fossil still dominant in generation

HIGHLIGHT

Energy Transition - Progress & Gaps

- ❏ Energy efficiency still underdeveloped (big untapped potential)
- ❏ Building sector = key opportunity (need BEC)
- ❏ EV adoption growing — driven by strong incentives
- ❏ But major gap: E2Ws & E3Ws lag behind
- ❏ Policies risk overlooking low-income fuel burden
- ❏ Rooftop solar growing — but still constrained by regulation

(Energy)Lab

THANK YOU!
